ROLLER GRILLES

Aesthetic - Sturdy - Secured

The security of your commercial operation is definitely a matter of concern for you. For applications requiring a combination of safety, convenience, and aesthetics, we present our 12mm and 19mm Roller Grilles.

Made from aluminum, the grilles feature the popular brick pattern to ensure uninterrupted airflow and visibility. At the same time, the aluminum tubing offers the highest level of protection against theft and securing no-entry zones.

While the aluminum roller grilles might appear heavy due to their solid looks, they are light in weight yet high on quality and safety. The grilles are available in powder-coated and anodized finishes to perfectly match the ambiance. The brick-shaped links are attached to a moulding made from nylon for quiet and secure operation.

Standard Specifications:

Opening size:

- 12mm - Maximum opening size up to 3.6m high x 3.6m wide hand operation.
- 19mm - up to 5.0m high x 8.0m wide

Operation

All doors are counterbalanced per manual operation and motorisation is optional. This is recommended for wide and/or high openings.

Applications

- Suitable for many commercial applications including: Shopping Centres, Bar Tops, Counter Tops, Shopfronts, Doorways, Bottle Shops, Sports Complexes, Arcades, Clubs, Carparks, Ventilation Security, Delivery Docks.
